

2018 Career Development Study

June 2018

About this DataNow® Snapshot

DataNow® Snapshots provide highlights of Brandon Hall Group research and illustrate how the data can be filtered by organization size, revenue, corporate performance, and more, using DataNow®, Brandon Hall Group's proprietary HCM research tool. This Snapshot features data from the 2018 Career Development Study.

2018 Career Development Study

Most organizations are in the very early stages of their evolution in improving career development, according to the 2018 Brandon Hall Group Career Development Study:

- Half of organizations have less than 10% of their employees on clear and well-communicated career paths.
- Less than half of organizations align the career paths they have developed with any type of competency.
- Less than 20% of organizations support their career and competency development programs with technology.

But a well-designed, well-executed career development program can have a significant impact on business results. Almost two-thirds of respondents said their career development framework helps with talent retention and employee engagement; 57% said it provides a stronger employee value proposition — and this includes organizations whose programs are not optimally developed.

The top barriers to creating career frameworks and career paths for employees are: lack of clear communication in matching competencies to career opportunities (59% of organizations); absence of competencies tied to career paths (51%) and lack

of technology or integrated technologies to support career development efforts (46%).

Organizations with career paths aligned with at least one type of competency (core, functional, leadership etc.), are twice as likely to see increased year-over-year employee engagement.

Career coaching can also have a big impact on career development efforts. The research shows that organizations with some sort of career coaching (formal, informal, or both) are more than 3 times more likely to see increased employee engagement than organizations that do not provide career coaching.

The study, conducted April-June 2018, drew 330 valid responses from 32 industries. Two-thirds of responses came from the U.S. and Canada and 22% from EMEA nations.

DataNow™ provides full and unedited responses to most of the survey questions comprising the quantitative study. Question responses can be filtered by company size, revenue, and geography, industry segments and business performance. Our Services

GET HELP TO DRIVE RESULTS FOR YOUR TALENT

In today's volatile and global business climate, managing talent for high-performance plays an increasingly crucial role in an organization's growth and future success. Effective talent management is a top priority in organizations everywhere because, while organizations recognize the need to obtain and retain people with the very best skills, they continue to struggle to implement effective strategies to do so. HR and Learning professionals need to be able to successfully define organizational talents needs and skills, identify talent strengths and career goals, and align organizational needs to individual needs. Rethink your strategy, validate your assumptions, transform your business, and optimize your time with the use of reliable data, tools, and guidance.
