Budget and Timeframe

Budget and Timeframe	Timeline: 12 Months
Number of (HR, Learning, Talent) employees involved with the implementation?	25
Number of Operations or Subject Matter Expert employees involved with the implementation?	3
Timeframe to implement	Six Months
Start date of the program	October 2017

Business Conditions and Business Needs

Recruitment of physicians and providers requires a unique and comprehensive approach. A certain finesse, art, and science is applied to identify, constructively attract, build a relationship with, and hire talented professionals who are the core of a thriving health system. These professionals ultimately are responsible for the health system's ability to deliver quality health care to the communities it serves.

SSM Health, a Catholic not-for-profit health system with more than 20 hospitals and 300 physician offices, faced the challenge of growing its system because it lacked a robust system-wide process for hiring physicians.

Although each market within the system had its own process for recruiting physicians, the system as a whole was deficient in collaboration, work processes and data measures necessary to effectively address the need for growth. Facing more than 170 open physician positions for the year, the outlook for recruitment success remained flat.

At the end of the third quarter 2017, SSM Health leaders invested in enhancing its physician and provider recruitment process – an initiative that would demonstrate immediate impact. The enhanced talent-acquisition strategies aligned with industry benchmarks and data-driven performance. It improved the system's ability to work collaboratively, allow prioritization of resources for mission-critical searches, and produce enterprise-wide metrics that enable leaders and stakeholders to make better-informed decisions for physician hires.

The result has been an advanced physician- and-provider talent-acquisition process and culture that well positions SSM Health for success now and into the future.

Overview

Growth: Hire the Number of Physicians per Plan

As the system's imperative to create a high performing and data-driven culture took shape, the need for a more effective, consistent, transparent, and predictive process for recruiting exceptional talent ensued.

The plan had a subset of requirements:

- 1. Performing a provider-needs assessment.
- 2. Evaluation and discussion of needs at various strategy councils.
- 3. Provider recruitment-plan validation.
- 4. Budget integration and financial impact.
- 5. Defined current physician- and-provider state, expected physician- and-provider reductions, and expected physician- an- provider additions.
- 6. Stakeholder participation and decision support.

To fulfill the directive of growth and develop support for this strategy, the system implemented several strategic processes and goals:

- Define the "plan" using a commonly accepted form/process for each region/hospital in conjunction with the subset of assumptions above.
- Expand candidate outreach through a systematic approach to outbound sourcing and brand awareness.
- Grow candidate pipelines by creating, building, and sustaining key relationships with physician- and-provider training programs.
- Measure to industry standards using best practices for time-to-fill, interview-tohire, and fill rates.
- Define key performance indicators (KPIs) and report performance metrics that are informative, consistent, and predictive to all key stakeholders.
- Incorporate best recruitment practices, base knowledge, and disciplined use of applicant-tracking system across all facilities.

- Leverage screened candidates across every healthcare ministry and facility with recruitment needs.
- Improve vendor economies of scale based on multiple needs in the same specialty.

Design and Delivery

At its core, the design and delivery of the physician- and-provider talent acquisition process began with the applicant tracking system (ATS) Taleo.

Refinement of the ATS was required to better align the system's goal and the technology used by the recruitment team. Several field modifications/additions were implemented to accommodate an enterprise-wide approach to reporting on the various stages of physician and provider recruitment. Such changes include:

- Customized opened-requisition forms to allow different field requirements outside the standard general-talent process.
- Search firm usage and tracking.
- Sourcing categories and placement sources.
- Number of applications.
- Number of opportunities presented.
- Number of interviews.
- Number of rejections.
- Number of letters of intent (LOI) offered.
- Decline/reject reasons.
- Number of employment agreements (EA) extended.

More granular construction of process improvements included tracking time to fill, time to start, and conditional status formulas for measuring time-frame stages to identify service-level agreement (SLA) gaps (e.g., scheduling of interviews, legal employment agreement drafting, employment agreement offer sunsets, etc.) and elongated/inefficient/stalled processes leading to a candidate's loss of interest.

Continuous compliance audits, together with leadership-driven usage, have allowed more comprehensive and informative data sets for analysis.

Integration

As a data-driven performance organization, SSM Health installed Taleo, a third-party data analysis program (Oracle Business Intelligence) to allow for several data-pivoting tables, enabling greater examination of data on defined performance indicators while at the same time providing the flexibility for ad-hoc reports required/requested by key stakeholders and system management.

Figure 2: Data-Driven Performance

Source: SSM Health

Through better alignment with physician- and-provider best processes and reporting practices, greater insight and predictive confidence for recruitment success has been achieved across the entire system

Measurable Benefits

The measurable benefits experienced by SSM Health's enhanced process include:

- Fulfillment of physician needs in 2017 with an overall 34% reduction in openphysician requisitions, from 173 to 114.
- Exceeding the system number of planned-physician needs in the first quarter of 2018, 32 planned vs. actual of 33.

- Enterprise-wide collaboration and executive alignment with the business strategy for growth.
- Realistic validation of time-to-fill days for greater strategic-planning confidence.
- Dramatically increased the visibility at the executive, stakeholder and recruiter levels.
- Challenged searches that require further examination/consultation and resources.
- Greater understanding of the physician- and-provider recruitment timelines.
- Increased focus on organic sourcing of quality candidates.
- Sources of placements.
- Strategically targeted the use of retained search firms.
- Recruitment seasonality by specialty.
- Concentration of effort on system needs and mission-critical searches.

Return on investment (ROI) is measured on the number of physicians hired to plan, stakeholder satisfaction throughout the process, candidate-interview experience and quality of hire as measured by the stakeholder/retention.

Prioritization of five key-performance indicators is used as a baseline foundation for the achievement of growth:

- Offers accepted (number of fills to plan).
- Fill rate (as compared to industry benchmark from the Association of Staff Physician Recruiters).
- Time to Fill (days to fill a position in a specialty compared to industry benchmark from the Association of Staff Physician Recruiters.)
- Interview-to-hire ratio (analyzing quality of candidates for presentation).
- Employment start date (timeframe to revenue impact).

Overall

The advanced process has achieved great results – fulfilling the business need for growth through physician hires in 2017 and exceeding the planned number of physician hires in the first quarter of 2018.

The ability to show – at a system-level – full transparency of effort, accountability and demonstrated predictability of success continues to lend tremendous insight, collaboration and confidence to the health system's strategic planning.

While data collection and reporting are critical to the overall success of the initiative, equally as important are interpretation and analysis of data and its benefits. For example, it is critical to understand when to pivot resources, negotiate economies of scale with vendors for multiple positions, apply revisions to strategic sourcing and have meaningful, consultative discussions with leaders and key stakeholders.

All these benefits are designed to support successful outcomes and provide the flexibility and validation needed to adjust recruitment strategies at any time.

Lessons Learned

- Keep things simple and digestible. Use a one-page dashboard. It is easy to wrap data into a highly matrixed and confusing report. The dangers or paralysis-by-analysis may confuse executive leaders without proper context to the overall strategic plan. The process works only if people use the system and put the data in the right place. Training and routine audit is essential.
- **Continuous quality improvement.** Listen closely to the recruiters and find the challenges they have with the system immediately so there are no delays in developing solutions.
- **Challenge the status quo.** It's not enough to just use the system to report and view. Question the process, ask the for the details and challenge the data to support continued progress.

The Future State

- Comprehensive, stronger, systematic, and state-of-the art approach for candidate sourcing to increase employer-brand awareness and equity.
- Innovative platform to drive candidate intakes and pipelines using technology.

- Core value propositions at system- and regional-market levels for physician- andprovider recruitment messages.
- Efficient and disciplined use of applicant tracking system and metrics to advance key-performance indicators to industry-top quartile.
- Cadence of performance metric reporting to key leadership stakeholders and system management to stabilize reactionary recruitment and enhance proactive recruitment strategies.

About Brandon Hall Group

Brandon Hall Group is a HCM research and advisory services firm that provides insights around key performance areas, including Learning and Development, Talent Management, Leadership Development, Talent Acquisition, and HR/Workforce Management. With more than 10,000 clients globally and more than 20 years of delivering world-class research and advisory services, Brandon Hall Group is focused on developing research that drives performance in emerging and large organizations and provides strategic insights for executives and practitioners responsible for growth and business results.

Inspiring a Better Workplace Experience

Our mission: Empower excellence in organizations around the world through our research and tools every day. At the core of our offerings is a Membership Program that combines research, benchmarking and unlimited access to data and analysts. The Membership Program offers insights and best practices to enable executives and practitioners to make the right decisions about people, processes, and systems, coalesced with analyst advisory services which aim to put the research into action in a way that is practical and efficient.

Membership Offers Tailored Support

Our membership delivers much more than research. Membership provides you direct access to our seasoned team of thought leaders dedicated to your success, backed by a rich member community, and proactive support from our client services team.

RESEARCH ACCESS & EVENTS

- Reports
- Case Studies, Frameworks & Tools
- DataNow[®] & TotalTech[®]
